

10 great reasons to choose STORViX

The benefits for your organisation

1. ENSURE DATA INTEGRITY AND DATA RECOVERY. SAY GOODBYE TO ALL CONCERNS ABOUT YOUR DATA.

The **STORViX** approach:

- **Data-aware (optimised to map resource costs)**
- **Application-aware (saving time for the IT team)**
- **Based on integrated data protection by design (ensuring data is fully protected at all times)**
 - **assures data integrity**
 - **avoids silent corruption**
- **ensures high system performance.**

This allows you to get rid of backup software (and achieve real DR) – such software is unnecessary for automated management of recovery points both on site and off site (thanks to flexible collaboration with proven Managed Service Providers – MSP).

2. NO NEED FOR SUPPORT, ALTHOUGH OUR PROMPT HELP-DESK IS THERE, JUST IN CASE.

STORViX OS is the OS storage solution par excellence. It is designed to run with minimal technical support. The user interface is simple and intuitive, the **CloudSight** application shows the system status in real time using clear graphics. **CloudSight** operates intuitively by supervising the system and monitoring for problems. This reduces the need for reactive fixes, prevents downtime and gives you the confidence that your systems can always operate in optimum conditions.

3. NO HIDDEN COSTS WITH AN ALL-INCLUSIVE LICENSE.

STORViX OS eradicates all compatibility and information-loss problems due to system updates and upgrades. Our developers are constantly looking for ways to innovate and enhance the product. The regular update releases ensure that our customers always have the latest software, giving them a storage solution that is permanently up to date.

4. OPTIMISED WORK PROCESSES AND PROVEN INTEGRATION BETWEEN COMPONENTS.

We can set up your hardware tailored to suit the way you plan to use the storage (MSP or performance or archiving). We can also provide a setup suited to your infrastructure: N-NAS, F-Performance, DS-Security, VX, MSP.

5. SAVE TIME AND RESOURCE ON STORAGE MANAGEMENT.

STORViX OS automates the main data-storage system functions, including advanced features. This saves you time and frees up your IT team by avoiding the need for constant supervision. By planning the functions around operational needs, you avoid resource wastage and achieve smoother, more efficient processes. Data access is made significantly faster through dynamic use of the adaptive cache layer, while instant recovery saves time, thus boosting productivity without interfering with your operational activities.

10 great reasons to choose STORViX

The benefits for your technical team

6. STORViX OS: AN ASSISTANT YOU CAN DEPEND ON

STORViX OS revolutionises the world of storage. Its architecture is independent of RAID controller cards, keeping your system agile and flexible without compromising on optimum performance.

STORViX OS is fast, secure and infinitely scalable. The storage functions can be configured and automated to suit your requirements, creating optimised, streamlined work processes.

STORViX OS can be used as a primary-storage system as well as for long-term retention and archiving architectures, including multi-tenant solutions.

7. HYBRID + UNIFIED: THE PERFECT COMBINATION

STORViX OS makes storage management a breeze with its unified implementation of the SAN and NAS protocols.

STORViX OS uses SSD technology and exploits the capacity of enterprise disks to reduce costs without sacrificing performance.

As a SaaS solution, your **STORViX OS** system is always up to date, and the regular releases do not affect system operation or uptime.

8. INTUITIVE AND EASY TO USE – EVEN FOR LAYPEOPLE

The interface has been designed to make the system simple and intuitive even for less technically versed users. No specialist training is required, and you can implement the system without changing your work processes or organisational structure.

The **CloudSight** application monitors all system parameters in real time, with no need to install additional components, while assuring optimum operating performance at all times.

9. SUPPORT FOR COMPLEX SITUATIONS

The **CloudSight** application helps you keep an eye on the resource usage for each storage task. We are on hand to advise and support you every step of the way through your complex infrastructure implementations.

10. FAST RECOVERY

If you need to recover your data, you can save remote copies in Filer Appliances at different physical locations, or you can opt for a DRaaS (Disaster Recovery as a Service) plan.

STORViX OS FREES UP TO 60% OF STORAGE SPACE COMPARED TO TRADITIONAL STORAGE
