STORVIX™

Data Storage Solution for
GOVERNMENT AGENCIES

A smart way to store, manage, and protect sensitive data

As government agencies face the challenge of managing growing amounts of sensitive and complex data with limited budgets, they must prioritize cybersecurity, business continuity, and efficient data management strategies. Our AI-driven solution—AiRE IntelligentFiler—provides a reliable and cost-effective solution that eliminates downtime, increases performance, and complies with the highest security standards.

Advanced Technology

AiRE's core is powered by AI and machine learning algorithms which allow the solution to drive itself and deliver high performance and scalability. This means the system is self-sustainable and requires minimal human existence, resulting in cost & time savings.

Robust security features

Our multi-layer security features provide a high level of protection against cyberattacks and data breaches, ensuring that sensitive information is kept safe, secure, and always available when needed.
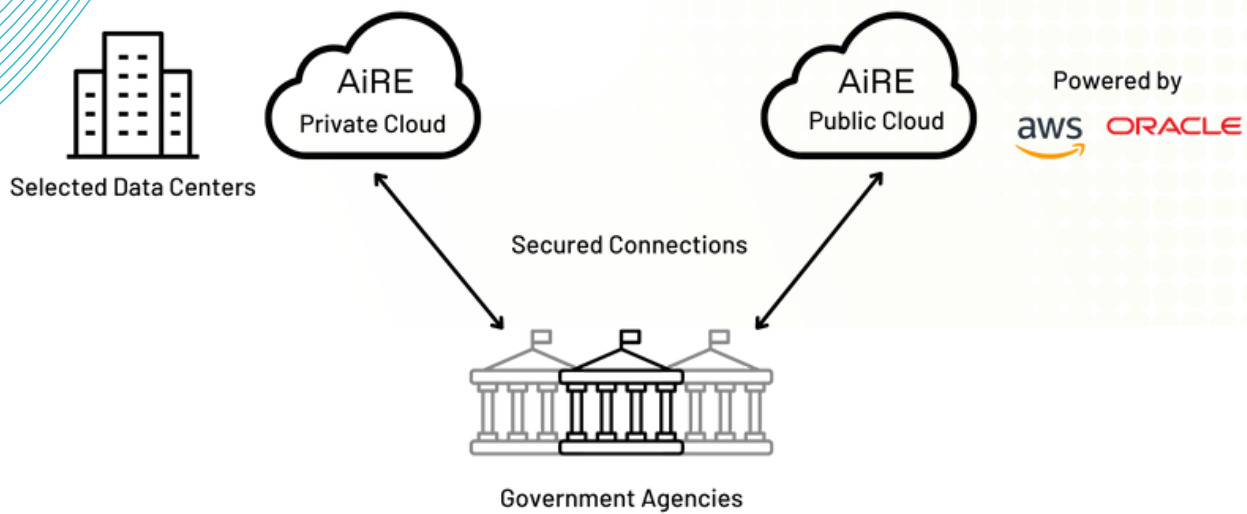

Compliance with data privacy regulations

As a European company, data privacy and GDPR compliance are one of our main concerns. AiRE incorporates advanced encryption techniques, data access management, administrative controls, and specific policy selection for each dataset to ensure that sensitive information is protected.

True data sovereignty

We offer the option of storing data in private clouds through local data centers. This allows for full control over sensitive data and ensures that it is stored within the country's borders, meeting data sovereignty laws and regulations.

STORViX™

Get AiRE in the cloud with STaaS (Storage-as-a-Service)

Selected Data Centers — AiRE Private Cloud — Secured Connections — AiRE Public Cloud — Powered by aws ORACLE — Government Agencies

Zero Downtime
> Self-healing algorithm
> Immutable snapshots
> Disaster recovery plan available

Cyber-secure
> Two-factor authentication
> Yubikey - hardware token
> Unique encryption key per dataset

Simplified Data Management
> Unified storage compatible with different protocols
> Consistent UX & Intuitive UI
> Plug & Play

Grow as fast as data
> Modular architecture
> Minimal tech support and maintenance
> Reduce TCO

Our partners

Unlock the potential of STORViX's partner ecosystem, featuring leading distributors, system integrators, and service providers. Through our strong collaboration with emt Distribution's dedicated sales and technical teams, we proudly deliver our comprehensive portfolio to customers across the META region. Our unwavering commitment to service excellence ensures a seamless customer journey from the very beginning.

Experience the freedom of choice with STORViX's flexible deployment options, whether it's on-premises, in the cloud, or a dynamic hybrid solution, thanks to our strategic partnership with established public cloud providers such as AWS and OCI.
